407 SERIES / WEAPONS PLATFORM

Product Information - Folding Version

The Advanced Lightweight Weapons Platform (ALWiP) features a modular system design to be quickly installed, removed, or reconfigured in order to support rapid deployments and flexible mission profiles. Outboard stations may be hinged upward during aircraft load-out transport. The system features optional integrated external data and ICS ports to facilitate ground crew communication with aircrew and to interface with critical aircraft mission systems. 14" NATO standard 1,000 pound class ejector racks provided at the outboard stations allow for installation of rocket and missile launchers, gun pods, external fuel cells, and many other standard payloads. Specially designed modular lightweight mounts are provided for gun systems such as the 7.62 M-134 "mini gun" and .50 Caliber GAU-19A/B Gatling gun and are strategically located at several inboard attachment points. A cargo rail system has been integrated into the platform's inboard surface area to provide versatile mounting options for ammunition magazines and mission equipment. The floor system may be expanded to include the entire cabin area, creating a flat and unobstructed floor for utility or assault missions.

Features:

- Modular design allows for rapid mission configuration
- Optional Integrated Communications System (ICS) and data port
- Two (2) stations equipped with 14" NATO standard ejector racks
- Cargo rail system on center section for flexibility when securing cargo
- Optional modular floor provides additional cargo rails for added capacity
